Chamois

Car Wash and Detail Centre

"GREEN WASH" PROGRAM

Did you know that the Chamois not only works hard to get your vehicle clean but is also working hard to keep our environment clean as well?

Did you know...

That washing your vehicle in your driveway is one of the most environmentally un-friendly things you can do around the house. The toxic mixture that runs off a vehicle washed in the driveway goes untreated into storm drains and eventually into rivers, creeks and wetlands where it poisons aquatic life.

Commercial carwash facilities like the Chamois are required to drain their wastewater into the sanitary sewer system where it is treated before it is discharged back into the great outdoors.

Washing a car at home may use between 80 gallons (302 litres) to 140 gallons (529 litres) of water, while a commercial car wash like the Chamois averages less than 65 gallons (246 litres) per car.

The Chamois uses efficient water saving equipment like computer controlled wash systems, high-pressure nozzles and pumps that minimize water usage.

All three Chamois locations use Eco Friendly cleaning agents that contain: No Hydrofluoric Acids, No Nonyphenol Ethoxylates, No Ozone Depleting Chemicals, No Aromatic Solvents and No Formaldehyde.

The Chamois has instituted new Employee and Customer Driven recycling programs at all of its 3 locations: 85 Reenders Drive, 850 Waverley Street and 1285 St.James Street.

The Chamois is committed to constantly improving it's techniques and facilities towards cleaner cars and a cleaner planet. Please help us keep Manitoba beautiful!

Thank you!
